

AMAN SINGH

Data Analyst

+91-7895441054 | amangusainofficial@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data Analyst with hands-on experience across the full analytics workflow — data cleaning, SQL-based business analysis, statistical analysis, machine learning, and dashboarding. Built and deployed a production-style data quality pipeline with automated validation gates and an end-to-end churn prediction model with a live app. Strong in translating raw data into decisions stakeholders can act on.

PROJECTS

E-Commerce Data Quality & Revenue Reliability Framework — *Python, SQL, Data Pipelines, Testing*

[GitHub](#)

- Built a production-style data quality framework for an e-commerce warehouse (fact_orders, fact_payments, dim_customers, dim_products), improving revenue reporting reliability through automated validation gates that quarantine invalid records before they reach the warehouse.
- Implemented idempotent incremental daily loads with date-partitioned ingestion and multi-date batch orchestration, enabling repeatable, auditable pipeline runs with persisted run manifests.
- Delivered KPI reporting (revenue, AOV, refund rate, repeat purchase rate) alongside an automated test suite, ensuring pipeline changes don't silently break business metrics.

Customer Churn Prediction — *Python, SQL, Scikit-learn, Streamlit*

[GitHub](#) | [Live Demo](#)

- Built an end-to-end telecom churn prediction system covering data cleaning, SQL business analysis, EDA, and feature engineering on 7,032 customer records, identifying key churn drivers (contract type, tenure, tech support).
- Trained and compared Logistic Regression and Random Forest models, optimizing for recall and ROC-AUC given the higher cost of missing likely churners in a retention context.
- Deployed a live Streamlit app that scores customers into Low/Medium/High churn-risk tiers, making the model usable by a non-technical retention team.

Public Health / Disease Trend Explorer — *Python, Streamlit, Data Visualization*

[GitHub](#)

- Built an interactive dashboard analyzing health indicators and disease trends across Indian states using HMIS, NFHS-5, and World Bank datasets, including choropleth maps and a correlation explorer for health determinants.
- Designed plain-language chart summaries to make statistical findings accessible to non-technical stakeholders.

Customer Shopping Behavior Analysis — *Python, Pandas, NumPy, SQL, Power BI*

[GitHub](#)

- Analyzed ~3,900 transactions to uncover customer segmentation and purchasing trends, applying SQL and statistical analysis (correlation, distribution trends) to identify patterns.
- Designed an interactive Power BI dashboard consolidating sales trends, category performance, and customer loyalty into a single stakeholder-facing view.

TECHNICAL SKILLS

Programming & Query: Python, SQL, Java

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel (Pivot Tables, XLOOKUP)

Machine Learning: Scikit-learn, Logistic Regression, Random Forest, Model Evaluation (ROC-AUC, Precision/Recall)

SQL Concepts: Joins, Subqueries, CTEs, Window Functions, GROUP BY/HAVING, Aggregate Functions

Databases: MySQL, PostgreSQL, SQL Server (basic), MongoDB

Tools: Jupyter Notebook, Git, GitHub, Streamlit

EDUCATION

Tula's University, Dehradun | B.Tech, Computer Science and Engineering | July 2022 – July 2026

Kendriya Vidyalaya F.R.I | Senior Secondary (PCM) | 73%

ACHIEVEMENTS & CERTIFICATIONS

- Winner/Podium finisher across 3 national-level hackathons/ideathons — 3rd Place, National Hackathon 2025 (₹15,000, 100+ teams); 2nd Place, National Ideathon 2025 (₹25,000 + ₹5L seed grant, 180+ teams); 2nd Runner-Up, Hack The Future 2.0
- Certifications: SQL (fundamentals), Python, Web Scraping with BeautifulSoup | Core Member, ACM Student Chapter
