

AMAN SINGH

Data Analyst

+91-7895441054 | amangusainofficial@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data Analyst with hands-on experience in SQL, Python, Excel, Power BI, data cleaning, exploratory analysis, statistical analysis, and business reporting. Built end-to-end analytics projects involving customer behaviours, revenue performance, churn prediction, and public-health trends. Skilled at transforming raw data into actionable insights, KPI dashboards, and data-driven business recommendations.

PROJECTS

E-Commerce Data Quality & Revenue Reliability Framework — Python, SQL, Data Pipelines, Testing

[GitHub](#)

- Built an end-to-end data-quality framework for e-commerce order and payment data, validating order integrity, nulls, statuses, referential integrity, and revenue anomalies before warehouse publication.
- Implemented KPI reporting for daily, weekly, and monthly revenue, average order value (AOV), refund rate, and repeat-purchase rate using structured warehouse models.
- Developed incremental daily processing with idempotent upsets, quarantine handling, batch orchestration, and automated regression tests to improve the reliability and auditability of business reporting.

Customer Churn Prediction — Python, SQL, Scikit-learn, Streamlit

[GitHub](#) | [Live Demo](#)

- Analyzed 7,032 telecom customer records using SQL and exploratory analysis to investigate churn patterns across contract type, tenure, monthly charges, internet service, and technical support.
- Engineered customer-level features and compared Logistic Regression with Random Forest using precision, recall, F1-score, ROC-AUC, and confusion-matrix analysis, prioritizing recall for retention use cases.
- Deployed a Streamlit application that converts model predictions into customer-level churn probabilities and Low/Medium/High risk categories to support targeted retention campaigns.

Customer Shopping Behavior Analysis — Python, Pandas, NumPy, SQL, Power BI

[GitHub](#)

- Analyzed ~3,900 customer transactions to identify purchasing patterns across customer segments, product categories, seasons, and subscription status using Python and SQL.
- Performed data cleaning, transformation, and feature engineering in Pandas, then used SQL to evaluate sales distribution, repeat-purchase behavior, customer lifetime value, and average order value.
- Built an interactive Power BI dashboard covering sales trends, customer demographics, purchase frequency, and category performance, translating analysis into business recommendations.

TECHNICAL SKILLS

Programming & Query: Python, SQL

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel (Pivot Tables, XLOOKUP)

Machine Learning: Scikit-learn, Logistic Regression, Random Forest, Model Evaluation (ROC-AUC, Precision/Recall)

SQL Concepts: Joins, Subqueries, CTEs, Window Functions, GROUP BY/HAVING, Aggregate Functions

Databases: MySQL, PostgreSQL, SQL Server (basic), MongoDB

Tools: Jupyter Notebook, Git, GitHub, Streamlit

EDUCATION

Tula's University, Dehradun

B.Tech, Computer Science and Engineering | July 2022 – July 2026

ACHIEVEMENTS & CERTIFICATIONS

- Winner/Podium finisher across 3 national-level hackathons/ideathons — 3rd Place, National Hackathon 2025 (₹15,000, 100+ teams); 2nd Place, National Ideathon 2025 (₹25,000 + ₹5L seed grant, 180+ teams); 2nd Runner-Up, Hack The Future 2.0
- Certifications: SQL (fundamentals), Python, Web Scraping with BeautifulSoup | Core Member, ACM Student Chapter
