Summary

Computer Science graduate with hands-on experience in Java backend development and full-stack application development. Experienced in building REST APIs, database-driven applications, and responsive web interfaces using Java, JavaScript, React.js, Node.js, Express.js, and SQL. Developed end-to-end systems integrating embedded devices, BLE communication, backend services, databases, and web applications. Strong foundation in object-oriented programming, data structures, and software development. 3× Hackathon Award Winner and Core Member of the ACM Student Chapter. .

Internship

Java Developer Intern, Vetra Innovations Pvt. Ltd.

June 24, 2025 – August 18, 2025

- Developed and maintained Java-based backend modules for application features and business logic.
- Integrated and tested REST APIs to connect backend services with application components.
- Debugged existing code, fixed application issues, and refactored modules to improve reliability and maintainability.

Projects

Cardiogram – Portable ECG Monitoring System — React.js, Node.js, Express.js, MySQL, ESP32-C6, BLE, AD8232

<https://github.com/gusainaman07/Portable-ECG-Monitoring-System.git>

- Developed a BLE-based portable ECG monitoring system for real-time ECG acquisition and visualization.
- Built a full-stack application using React.js, Node.js, Express.js, and MySQL to manage users, patient records, ECG reports, and waveform data.
- Implemented ECG analysis including BPM, RR interval, RMSSD, signal quality assessment, PDF report generation, and patient history management.

Movie Recommender System — Python, Pandas, Scikit-learn, Streamlit

<https://github.com/gusainaman07/movie-recommender-system1.git>

- Developed a movie recommendation system that suggests similar movies based on the user's selected movie.
- Used the TMDB 5000 dataset with content-based filtering and cosine similarity to generate recommendations.
- Built a Streamlit web application with movie poster display using the TMDB API.

Customer Churn Prediction — Python, Pandas, Scikit-learn, SQL, Streamlit

<https://github.com/gusainaman07/CustomerChurnPrediction>

- Built an end-to-end customer churn prediction system covering data cleaning, SQL analysis, feature engineering, model training, evaluation, and risk scoring.
- Developed a machine learning pipeline using Logistic Regression and Random Forest with one-hot encoding and feature scaling for customer churn classification.
- Deployed an interactive Streamlit application that loads a serialized model and provides real-time churn probability and customer risk classification.

Technical Skills

Languages: Java , JavaScript, Python, SQL, HTML, CSS

Technologies: React.js, Next.js, Express.js, Node.js, MongoDB, Tailwind CSS

Tools: Jupyter Notebook, Git, GitHub, Excel , Power Bi

Libraries: NumPy, Pandas, Matplotlib, Seaborn

Education

Bachelor Engineering (B.Tech) , Tulas University Dehradun

July 2022 - July 2026

Relevant Coursework: Bachelor in Computer Science and Engineering (B.Tech)

Graduated

Certifications & Achievements

Achievements: 3× Hackathon Award Winner , Core Member of ACM Student Chapter

Certification : Basics of Web Scraping certification , Python Certification , SQL Certification
